Audified STA Preamp Release Notes

2.2.0

- macOS 12 and newest DAWs compatibility improved. macOS plug-ins are now delivered as universal binaries for both Intel64 and arm64 platform – plug-ins are Apple Silicon native.
- Latency report to DAW was optimized and phase inversion compensated so it is now much safer to do dry/wet mix over the whole plugin in the DAW.
- The DC product of STA simulation is removed.
- Saturation parameter is now smoothed.
- Offline render processing optimized – avoid fade-in at the beginning of processed track.
- VST2 plug-in format no longer delivered.
- Any previous version of STA plug-ins is always uninstalled automatically when installing this version.

2.1.0

- Algorithm operating point can now be adjusted in the range of –24 dBFS – 0 dBFS using a calibration mechanism. Default calibration value is set to –9 dBFS and this value can be modified so all newly inserted STA plug-ins starts with desired operating point set.
- STA simulation algorithm protection added – too hot signal at the input of the STA circuit is hard-clipped. Clip indicators were added to VU meters.

2.0.0

- Plugins brand changed to Audified, IDs and licensing changed as well. Could be installed and used simultaneously with previous versions but cannot use former user presets.
- Major GUI update with Retina support.
- Algorithms operating point changed and VU metering recalibrated so 0 dBVU corresponds to –9 dBFS.
- Level In and Level Out parameters added so you can easily adjust signal level to reach desired saturation.
- DSP algorithms performance improved.
- Audio Unit mono to stereo ability added.

- Mac: Old OSX support dropped, at least OSX 10.9.5 is required.
- ProTools advanced shortcuts functionality improved.
- ProTools Audio Suite functionality improved.

1.5.2

- ProTools on Mac compatibility improved
- Studio One 3 stability fixed
- User presets handling improved
- Preamp volume fixed

1.5.1

- DSP initialization improved
- Tube mode soft switch implemented
- Windows compatibility fixed
- GUI updated

1.1.0

- AAX plugin format added
- RTAS support dropped
- DSP functionality when host tempo changes fixed

1.0.0

- First release

Thanks for using our products!
