Introduction

Thank you for purchasing AUDIFIED VocalMint Saturator. VocalMint Saturator is a channel strip saturator and shaper uniquely tuned to suit the vocals processing. All conveniently packed under the hood of one-knob interface.

How It Works

Unlike many other saturation plugins on the market, VocalMint Saturator is carefully tuned to suit vocals of any preferred genre. We simplified the interface for you to the bare minimum of one single knob. This allows you to significantly speed up workflow and shift the focus back from knob fiddling to what really matters - the creativity.

VocalMint Saturator combines Audified's world-class-quality model of real valve circuits as well as the tone shaping derived from our successful ToneSpot Voice Pro.

Software Installation

Download the recent version of the application:

http://services.audified.com/download

- **Windows**: The downloaded file is packed, unzip it. Run the installer and follow the on-screen instructions. You can select the destination path and the installed plug-in format during the process.
- **Mac**: Mount the downloaded disk image and run the installer. You can select the installed plug-in format by clicking the Customize button. Plug-ins are installed in the standard locations and the control app appears in the Applications folder.

Software Uninstallation

- **Windows**: Navigate to the VocalMint Saturator program folder in the Start menu and run the uninstaller.
- **Mac**: Open the provided disk image and run the uninstaller.

Opening the plug-in

AUDIFIED VocalMint Saturator works on all main digital audio workstations (recording applications) as a plug-in.

To open the plug-in, locate the plug-in in effects selection (usually a hierarchic menu). The VocalMint Saturator is listed in the Other group or in the AUDIFIED group when the manufacturer sorting is offered.

Before the first use

Clicking on the Audified logo on the bottom of the plug-in, one may access the service tools panel.

- The Zoom button (magnifying glass symbol) to change the desired size of the plug-in.
- The News button (bell symbol) where the tutorials, news and special offers are shown
- The Services menu (wrench symbol)

Services menu

The Services menu (wrench symbol) allows to access:

- Calibration
- Product updates
- Audified web site
- Support area on the Audified web
- Feedback form on the Audified web
- Product version and other info

Calibration

The Calibration value adjusts the relation between the digital zero (maximum signal value in digital systems) and the analog zero (the value affecting the non-linear characteristics of the effect).

The default Calibration value is -9 dBFS, so 0 dBVU equals -9 dBFS.

We recommend to set the default calibration of the plug-in according to your preferences and working headroom before the first use of the plug-in. You may save the calibration settings as default by clicking the button *Save as default* so you don't have to worry even when opening more instances of the plug-in.

Plug-in usage

Use the main knob to choose the amount of processing of your vocals. The VocalMint Saturator knob is not just any other blend knob. **It controls the variety of parameters in the non-linear way to achieve exceptional usability across the whole range of the knob.** Is the saturation effect too much or too little? Use the calibration fader to tune the valve analog zero and get exactly the sound you want.

Technical info

Specification

- AAX, AU, VST3, VST2
- macOS, Windows plug-ins

Requirements

- macOS 10.9 and newer
- Windows 7 and newer
- 200 MB of disk space required

Conclusion

We believe that you can work with VocalMint Saturator now. However, if there would be something unclear or if you would need an assistance, feel free to contact us at
