Introduction

Dear musician,

Thank you for purchasing inValve 2 effects. The Preamp is a simulation of a valve circuit, the Compressor and Equalizer are a combination of the valve preamp with some additional processing. The original hardware uses a similar hybrid model.

The effects are designed to be used especially as insert effects in any recording software.

The warming change of sound is slight but it applies to all the volume levels, so there is no sharp threshold.

AUDIFIED branding

The product is branded AUDIFIED to fit into our professional studio product line. However, there are some relics guaranteeing the backward compatibility, such as folder names, still named AUDIFFEX.
